

# Blue Engineering

Engineers with  
social and ecological responsibility

# **A Modular Student-Driven Course Design that is Implemented at Four German Universities.**

---

Social and Ecological Responsibility  
within Engineering Education

## André Baier

---

postdoc at Technische Universität Berlin

coordinator of the sustainability certificate for students

vice chairperson of the sustainability council

# Watching a Video Online

---

## Watching a Video on the Internet

---

a friend of you has told you over lunch that there  
is new video on the internet that you definitely need to watch

once you get home you immediately go to watch the video

## **Assignment: List 30 Requirements**

---

partner up in groups of two / three

What are 30 material, infrastructural and / or social requirements to watch this video?

## **Prerequisites of Modern Technology**

---

modern technology is ridden with prerequisites

material requirements are temporally and spacial far-reaching

social preconditions are disguised as habits – hard to identify

## Chain of Matrial Requirements

---

Laptop – Keyboard – Letter-Color for the little letters  
Spray nozzles for the Color – Lorry which transports them  
Streets and Tar – Color for the Lines on the streets  
Guard Railling / Crash Barrier – Posts and Reflectors  
Recycling Factory or Landfill for the Reflectors ... and Cats

## Chain of Social Preconditions

---

Friend - time - people who want to watch videos online  
who can use computers - people who know how to produce  
spray nozzles - educational System who educates them  
people who work and need to work to cover their costs  
Driving Schools - Police - Hospitals - Insurance/Welfare

# Building Blocks - Core Element

---

**over 150 interactive teaching/learning units**

15 to 90 minute long sessions on a complex topic

**combination of different methods and broad variety of topics**

role playing, educational games, case studies, station learning, learning...  
pre-implementation diagnostics, fracking, food ethics, cooperatives...

**no expert knowledge necessary,**

**instead the facilitation of a group process**

the participants drive their own learning which is only facilitated

**well documented, easy to use manuals**

little preparation is needed to conduct a building block

[www.blue-engineering.org](http://www.blue-engineering.org)

# **the Blue Engineering Course Design and its Implementation at four Universities**

---

Social and Ecological Responsibility  
within Engineering Education

# Origin of the Course

---

**“We need more social and ecological responsibility  
within engineering education and within the engineering profession.  
This is our idea...”**

*Winter Semester 2008/2009  
student group in the course  
Sociology of the Engineering Profession*

# Characteristics of the Course Design

---

students are the driving force of the course

variety of alternative teaching methods / content

group and discussion oriented – minimum level of hierarchy

engineers themselves engage in social and ecological responsibility

not limited to one topic alone, but a diversity of topics

not teacher-centred but peer-to-peer learning

interactive and transferable course design

# Learning Outcomes of the Course

---

## **social and ecological responsibility**

to foster discussion about social and ecological responsibility of engineering which is to be seen differently on the individual level and on the societal level

## **student-driven character**

students co-conduct and co-create the course so that they take responsibility for it

## **competences of an education for sustainable development**

12 sub-competences: perspective taking, anticipating, gaining interdisciplinary knowledge, dealing with incomplete/overly complex information, cooperating, dealing with dilemmas, participating, motivating, reflecting principles, acting morally and independently supporting others (de Haan)

# Hard Facts of the Course at TU Berlin

---

**14 weekly lessons for 3 hours - 6 Credit Points**

**compulsory elective course in five Bachelor study programs**

Mechanical Engineering - Industrial Engineering - Transport Systems

Engineering Sustainable Management - STEM Orientation Study Program  
(MINTgrün)

**capacity of 75 students each semester**

sometimes they are all together in one room / sometimes split up in 3 rooms

**student tutors' role / lecturer's role**

three student tutors conduct the entire course, the lecturer supports them

# Three Parts of the Course Plan

---

## **core building blocks conducted by tutors**

Plastics - Technology as Problem-Solver!? - Responsibility and Ethical Codes...

## **conduction of existing building blocks conducted by student groups**

Two fixed topics: Gender, Diversity & Technology - Work and Labour Unions

## **conduction of newly created building blocks by students groups**

developed over the whole semester and documented for further use

# Assessment

---

**25 % Learning Journal** - individual assessment - reflecting every week

**25 % Conduction of Existing Building Block** - group assessment

**25 % Conduction of New Building Block** - group assessment

**25 % Documentation of New Building Block** - group assessment

# Design of Learning Outcomes

---

## **iterative participatory process to describe the learning outcomes**

starting in spring 2013 and finishing in spring 2015

two lecturers of the Blue Engineering Course facilitated the process

experts: student tutors, course alumni, strategic controlling of TU Berlin...

presentation and discussion at three international conferences

## **levels of the design down process**

General Framework

2 Learning Outcomes on General Level

**12 Specific Learning Outcomes on Module Level**

48 Learning Outcomes on Block Level

Learning Outcomes on Activity Level

# 12 Learning Outcomes on Module Level

---

Merging the two general learning outcomes with Gestaltungskompetenz leads to a course-specific adaptation of the 12 sub-competences.

## C4 - Motivating

to motivate oneself as well as others to become active

## C4 - BE - Motivating

Students **motivate** oneself and others **to democratize the reciprocal relations** between technology, individuals, nature and society.

# Comparative Self-Assessment

---

## **object of the evaluation**

the self-assessed competence gain of the students

comparing the beginning (pre) of a semester with the end (post) of a semester

## **design of the questionnaire**

learning outcomes on module level are the basis for test items

6 Point Likert-Scale - 1 - Low Agreement - 6 - High Agreement

## **data collection**

3 semesters - at the beginning and at the end (prepre/postpost)

3 semesters - at the end and looking back at the beginning (then/postthen)

## **data analysis**

comparison of means, t-test, CSA Gain, Cronbach's Alpha

# Comparative Self-Assessment

## Comparison of Aggregated Means

# Comparative Self-Assessment

## Comparison of Aggregated Means

# Implementation at Four Universities

---

**TU Berlin, TU Hamburg, HS Düsseldorf and HTW Berlin**

**HS Ruhr West and HS Esslingen are about to implement the course**

**modular course design can be adapted to various study programs**

**advocate within the university who puts trust in students**

**students become tutors - so continuous development**

# **ArTechS - Summer School**

---

**Merging Art and Technology for a Sustainable Now**

**01 > 13 July 2019**

**TU Berlin**

**University of Arts Berlin**

**20 stipends for accomodation and travel allowance**
