

Engaged and responsible universities shaping Europe

Plenary II: The role of public policies driving universities' social responsibility and engagement

Stanislav Kmet

Public policies synergies together with engaged and responsible universities in Kosice shape the region

The prospects of regional partnerships are always successfully boosted by prosperous and successful regional public policies and economic circumstances.

- Public and community engagement has always been a characteristic mission associated with universities.

IMPORTANT

Engagement and social responsibility are not new in the mission statements of universities and are often referred to as the „third mission“ (alongside education and research).

Third mission

IMPORTANT

Governments, in particular in Western Europe, have become increasingly active in promoting and shaping Corporate Social Responsibility (CSR)

Following Figures show that Western European governments are significantly more active in promoting CSR than governments in CEE countries.

Three indicators were compared:

- Policies Aiming to Raise Awareness of corporate social responsibility (CSR)**
- Policies on Socially Responsible Investment and**
- Sustainable public procurement**

Regional Differences in CSR Policies in Europe: Distribution of the 212 CSR policy initiatives across Europe

Courtesy: Steurer, R. et al.: Public Policies on CSR in Europe: Themes, Instruments and Regional Differences. In: Corporate Social responsibility and Environmental management, 19, 2012, 206-227.

Key roles for government organizations in Social Responsibilities:

- SR public procurement
- Finding balance between soft and hard power (legislation vs. voluntary) to ensure social responsibility among institutions and stakeholders
- Creating an environment for discussion
- Mediation among different institutions and stakeholders (multipartite discussions)
- Convening

The fields of influence for both CSR and USR policies can be characterised as follows:

- Integrated labour markets and social inclusion „flexicurity“
- Skills development, lifelong learning and employability
- Public health
- Working environments that are conducive to innovation
- Environmental resource use and pollution
- Poverty reduction and human rights

*Courtesy: Genevieve Besse, DG Employment, Social Affairs and Equal Opportunities:
Promo-tion of CSR by the European Commission*

Universities and their mission, a need for innovations

- *Universities (as derived from its Latin name „universitas magistrorum et scholarium“), are degree-awarding institutions, community of teachers and scholars.*
- Universities, as pillars for human development, are “socially responsible” towards their human product (the graduates) and their potential stakeholders who affect the future of business and society.
- A traditional understanding of university as a „research, learning and teaching community“ remains the same, but no institution can survive and thrive without innovation.

Universities and their mission, a need for innovations

- The growing importance of knowledge in economics and society might strengthen the importance of universities, but this is not happening automatically.
- **Dilemma:** „How then to preserve university spirit, functions, significance and image valid for the centuries, maintaining its role in society, while innovating and responding to a rapidly changing global world?“

G.B. Shaw: „We are made wise not by the recollection of our past, but by the responsibility for our future “.

As mentioned above, a new (minimum) paradigm for USR could include the following elements:

- **Ethically grounded research**
- **Teaching based on educational aims founded on critical reflection, values and knowledge including traditional wisdom and indigenous knowledge (not only skills and competences)**
- **A social dimension towards students (access in accordance with the ability to achieve equity) and staff (e.g. gender issues); and**
- **The inclusion of national and international dimensions.**

In developing this paradigm, universities in (our) countries should reflect on the entire education process, from early childhood education to lifelong learning.

Universities and their mission, a need for innovations

In the practice of USR, the need for the following arise:

- A clear model and engagement principles (especially on the trade-off between excellence and social responsibility or ability and social support);
- A governance system;
- Sustainable strategies grounded in evidence-based research (today, they are on an ad hoc basis); and
- A reward system, for both students and staff (**to initiate and promote volunteering as part of learning and help**).

RIS of Košice Region 2016 +

Regional Innovation Strategy *in accordance with* National and Regional Research and Innovation Strategy for Smart Specialisation

Innovation Ecosystem

Vision of Regional Innovation Strategy (RIS) 2016+

Košice region economically grows and has a developed innovation platform and open collaboration in research, development and innovations

Measurable indicators:

Economic performance of the region, **investments in research and development**, the number of innovative companies, **number of start-ups**, the number of scientific and engineering personnel, **the number of excellent research workplaces, university science parks**, technology and competence centers, number of patents, **the share of goods and services with higher added value**, the share of goods and services with greater added value for export

Regional innovation ecosystems at the European level

Mission

By means of the mutual cooperation of all stakeholders using internal innovation potential and available financial resources to achieve prosperity of the Košice region

Pillars of RIS 2016+

Excellence in research and development

Commercialization of research and innovation

Support of innovative business and promising sectors

Quality human resources for increased innovation performance of the region

KOŠICE'S INNOVATION DISTRICT

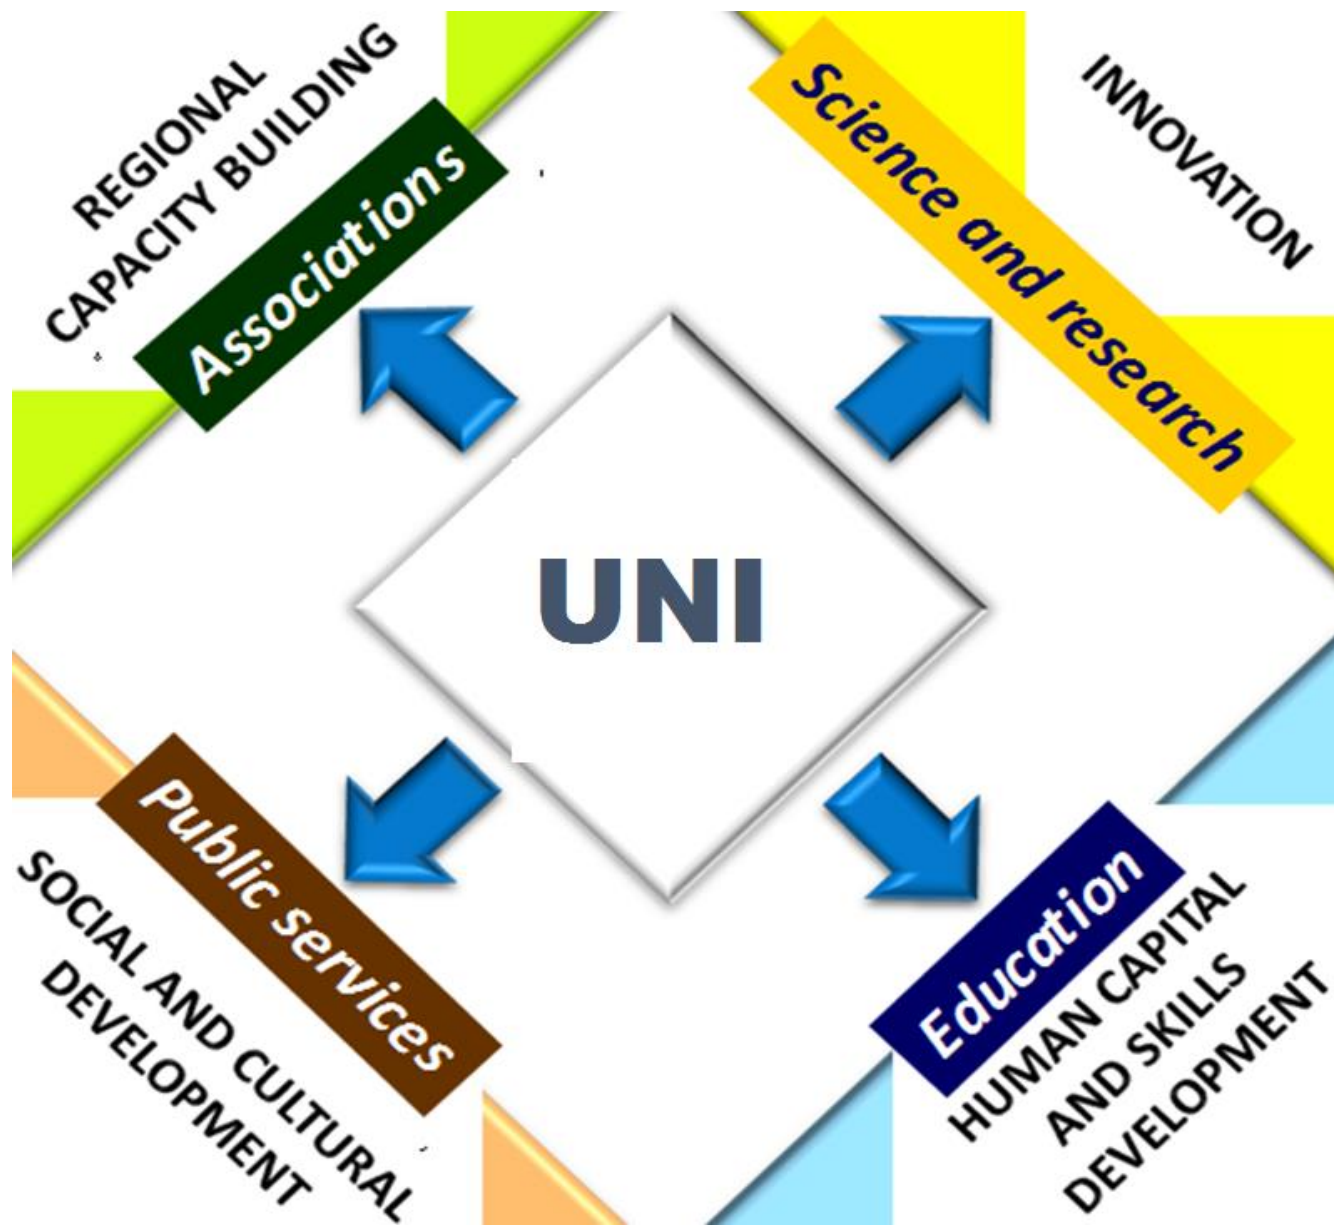

What do young adults study?

What kind of study is the greatest interest?

The universities in Košice offer all the required courses.

Universities in Košice are strong players in creation of Innovation Ecosystem

Challenges for universities

- Rising social and educational inequality (equality of opportunity, social inclusion, access to high quality education access, future jobs and skills, etc.)
- Recent demographic changes (ageing population and low fertility, family fragmentation, urbanisation, changes in lifestyle, etc)

As a result of increasing complexity and weakened reaction ability:

- New migration patterns
- The rise of populism and increasing distrust (post-truth society as an enemy of universities and academic freedom)

Challenges for universities

Missions of universities:

To play a pivotal role in generating knowledge, developing intercultural understanding and fostering civic engagement through their core missions.

Public policies, their dilemmas and new focus

- Oxford Dictionaries designated as the international word of the year 'post-truth' in 2016 and 'youthquake' in 2017.
 - 'Post-truth' is relating to or denoting circumstances in which objective facts are less influential in shaping public opinion than appeals to emotion and personal belief.
 - 'Youthquake' is defined as a significant cultural, political, or social change arising from the actions or influence of young people.
-
- Universities as truth-seeking institutions have found themselves in the era characterised as post-truth.
 - And that is why universities are and will be more confronted with mistrust and questioning their roles and knowledge they represent.

Public policies, their dilemmas and new focus

- At the same time, the word youthquake even more emphasises the responsibility of universities with young people who are deciding on future societal development.
- New role for public policies and universities - to rebuild a respect for power of science and objective arguments, both at the academia with young people and in the public.

This can be made it possible via **open and inclusive arenas**, based on academic freedom, leading to supporting trust building and truth-seeking.

„In our age of turbulence these two words – trust and truth – are inextricably intertwined.“

Courtesy: O.P. Ottersen, rector of the University of Oslo

University and its societal engagement

- Technical university of Košice celebrated 65 years last year, and the key theme of the celebration in the presentations and greetings of the guests was social responsibility of universities.

- The rector **Prof. Lambert Koch** (Wuppertal University, Germany) or the president **Prof. Joseph Klafter** (Tel Aviv university, Israel) highlighted:

Universities should not behave or having an image of ivory towers, separated from the worries of ordinary people.

University and its societal engagement

- In a post-industrial world, also universities will have to become post-industrial, the goals of our efforts are achievable through supporting interdisciplinarity, creativity, inclusion and interconnection not only triple helix (academia, firms and government), **but also with citizens and others.**

By the way, in 1980, the cities of Wuppertal and Košice signed a first partnership agreement between the cities and universities of Western and Eastern Europe, and TUKE and Bergische universitat, developed activities and contributed partially to a piece of work to overcome iron curtain.

Europe's symbol of unification Hans-Dietrich Genscher visited the TUKE and became an honorary citizen of the city of Košice.

Impulses for University social responsibility and engagement

Traditional role of the university in a society

University as Ivory tower -close circles of professors and students, later needs of society should be at the center of a university focus

- 20th century -

Built to meet the interests of industrial societies (or even to fulfill the plans of the number and structure of graduates to meet the needs of the industry before 1989)

-Magna Charta Universitatum 1988

autonomy, to meet the needs of the world, freedom of research and training,

European Higher Education Area

- New economic roles -

entrepreneurship, regional engagement, commercialisation of research

Corporate social responsibility (CSR)

- From the 60s -

companies should be focusing more on the impacts of their operations; not only profits but ethical principles, responsibility and behaviour reflecting the society, community and environment

- Today -

incorporated into business strategy – corporate philanthropy, volunteer activities, ethically produced products, corporate social marketing,..

- Future -

Should the universities adopt similar CSR approach?

Integration of social responsibility principles into strategic planning and annual reports

Impulses for Uni social responsibility and engagement

The goal is KOŠICE – Science City

Concept of innovation partnership in Eastern Slovakia

Systemic university: boundary-spanning role, involved in IT Valley regional cluster established in 2007, triple helix

Košice IT Valley

Association Founding Members:

- ▶ Universities (TUKE, UPJŠ)
- ▶ Košice Self-governing Region
- ▶ ICT Companies (T-Systems, NESS, Siemens PSE, VSE IT, Cisco, ST, Microsoft)

At present: over 50 members

Systemic university: boundary-spanning role, involved in IT Valley regional cluster, triple helix

AIMS OF THE ASSOCIATION:

- Development of human resources
- Improving the quality of educational and training programmes
- Enhancing the attractiveness of East Slovakia Region,
- Transformation of the region into knowledge-based society
- Development of information society within the region
- Enhancing social inclusion and reduction of regional disparities
- Establishing a communication platform among the public authorities, business sector and educational institutions
- Supporting scientific research projects
- Seeking funds in order to deliver its activities

Engaged university: actively engaged in the city and region – European capital of culture 2013 involvement, smart city initiative, etc.

- **Youthquake:** A significant cultural, political, or social change arising from the actions or influence of young people.
- **Košice The European capital of culture 2013**, generational change.
- Image of the city of Košice: from historical and industrial (metallurgy and manufacturing) to young, cultural **UNESCO creative city of media arts** (awarded in 2017).
- **Media arts** – build on the **IT employment and creative community**.
- Universities by **engagement of its employees and students** become in the heart of the Košice urban development.

Košice is and will be a historical place

... with the creative elements

Košice: UNESCO creative city of media arts

The question for the future is:

How to build the **future portfolio of activities** and to create a corresponding institutional and material assurance ?

Impact of the university on the city of Košice

- **University impact:** besides human capital formation, knowledge creation and development of new technologies, is significantly influencing the region – stimulation of entrepreneurial activities and allocation of high-skilled workers.

**MinebeaMitsumi from Japan
builds its largest factory in Europe in Košice.
For over 1000 employees and 100 researchers.**

**The concrete result of „policy synergy“ at national, regional,
local city and, last but not least, university level.**

Impact of the university on the city of Košice

Universities (through multiplier effects) have **direct monetised effects** on the local economy increase in employment, population and regional product/income:

- The study of the Faculty of Economics TUKE shows (prepared according to the methodology Luger et al. 2001):
- Local (additional) impact of TUKE in 2015 was: **443 jobs** outside of the university.
- **32 million EUR spent** in the city per a year (students, TUKE employees and TUKE expenditures in the city of Košice).

*There would be a big hole in the city
without universities ...*

PRIORITY PRIORITIES

How to inspire,
to motivate,
to guide?

**How to stabilize
young people in the region?**

**They need added values...
...we try to create them.**

How to make the innovation ecosystem sustainable and robust

Svatopluk vision
